## Objective

The objective of the Axisdata simple format is to provide a simple but complete way to communicate Rates and availability. The format main goal is to accomplish the following characteristics:

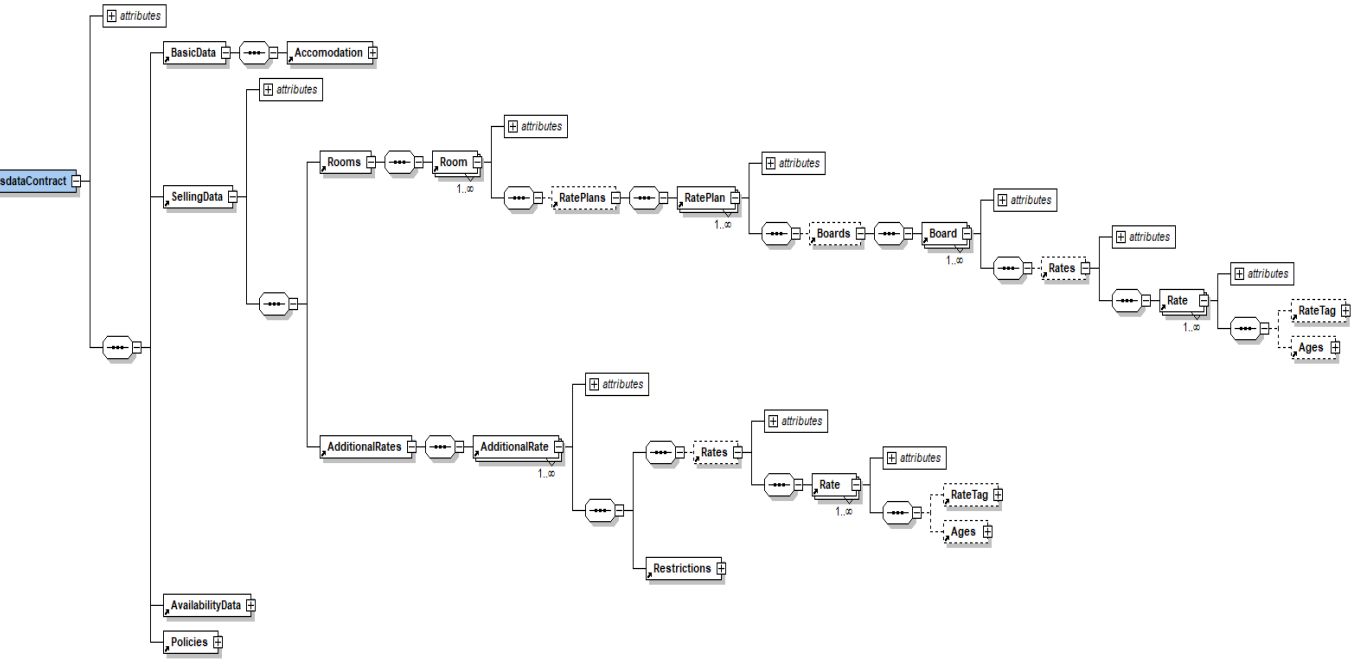
- Express both rates and availability in a single file
- File easy to read and easy to process by an automated process
- Use a well structured format, XML
- Can show per day rates (daily rates) as well as per stay rates.
- Simple structure but including any concept available in a selling contract

## Introduction

This document will cover the details of the Axisdata simple Notification Format. The document will navigate through the main sections of the format with an explanation of each concept and usage.

Details of the specific data types, node restrictions, and document structure are available via a formal schema (XSD). This document won't cover the details related to the specific data types and visibility of each element, as it is covered in the schema provided.

Visual diagram of the file structure



## Basic Data

Basic data includes the basic Info of the property, including the Hotel Code, GIATA code and name. GIATA code is only available to partners with a valid license with GIATA/TTI. HotelCode must be used for mapping and reference in the booking flow.

This format does not cover the static data of the property. Static data must be retrieved via XML API, see “OTA Based Communication Model V6.2” document for further details.

Hotel code construction info can be found in the appendix section.

```
<BasicData>
    <Accomodation Code="AMTSES0001" Name="Sun's place" Giata="123545"/>
</BasicData>
```

## Selling data

Selling data covers all the pricing details. It is structured as a collection of rooms that are available in the hotel. In this section it is defined the currency of the prices and the Tax policy. Currency code follows the standard ISO 4217 Alpha 3 and defines the currency used in all prices in the file. TaxIncluded property indicates if the rates include Tax or not.

```
<SellingData Currency="EUR" TaxIncluded="false">
```

### Rooms

Rooms node has a collection of room elements indicating the rooms available in the property. Each room is defined by its code, name and description. Room code must be used for mapping and reference in the booking flow. Room code classification can be found in the Appendix section.

The occupancy restrictions of the room are included at this level. Max room occupancy is expressed as Mix/max pax. Pax type restrictions are as Min / max values. InfantCountAsPax attribute determines if the infant consumes occupancy or not.

```
<Room Code="RMSD00000" Name="Room standar" Description="Imperial room" MinPax="1" MaxPax="4"
MinAdult="1" MaxAdult="3" MinChild="0" MaxChild="2" MaxInfant="1" InfantCountAsPax="true" >
```

## Rate plans

Inside the room level there's a collection of Rate Plans, each Rate plan is a set of prices, services and conditions defined under a tag. A room can have more than a Rateplan applicable and each one can have its own set of conditions, restrictions and prices.

<RatePlan Code="BHNA3.7" Description="Non-Refundable Advance Purchase 3">

See appendix E for more details on RatePlan CodeElements and their significance.

## Boards

Boards element contains a collection of Board elements that defines the possible boards available to the room.

Board code classification can be found in the Appendix section.

<Board Code="AI" Name="All Inclusive">

## Rates

The rates section contains the rates and conditions to apply to the rate, some of the conditions are valid for all the Rate elements and will be at Rates level, some conditions are only applicable a Rate level and finally few concepts can be found at both Rates and Rate level.

All rates share the same currency specified in the selling data section.

This is the list of all possible conditions found in a rate:

**BookDateFrom / BookDateTo:** Defines the date range the booking must be committed (Selling date) in order to apply for the rate

**DateType:** Defines if the rates are applied per day or the rate applied to the arrival date applies to all the stay dates, possible values Arrivals or Service

**PaxType**: Defines the pax type the rate applies to ADT (adults), CHD (children) or INF (infants)

**Min Stay / Max stay**: Stay conditions required to apply for the rate.

**Min Pax / Max pax**: Min max pax required to apply for the rate.

**Adults/Children**: The specific occupancy the rate applies for. As Infants are always free of charge, Infant occupancy it is not included, price will be the same no matter the number of infants as long as it is kept under the max specified in the room occupancy.

**ApplyType**: Defines if the rate is Per Room (PU) or Per Pax (PP).

**ApplyCycle**: Defines if the rate is Per Day (PD) PerStay (PS) or defines a specific number of days (xD).

**ApplyDaysFrom/ApplyDaysTo**: numeric value of the position of days in the days range defined in the ApplyCycle (xD) the rate applies to. I.E. in a cycle of 7 days it may specify days 2,3 and 4 in that range (ApplyCycle=7D, ApplyDaysFrom=2 applyDaysTo=4)

**StartDate / endDate**: Defines the date range of the service

**Amount:** Price expressed in the predefined currency.

**OfferGroup**: This code define a rate with offers applied (see offer tags), in order to qualify for this rate, the booking must include the OfferGroup code

**SharedBed / ExtraBed**: defines how many pax shares a bed (SharedBed) or if it required additional beds (ExtraBed). This attribute may be missing in case no shared/extra beds are allowed

```
<Rates BookDateFrom="2018-03-01" BookDateTo="2018-10-30" DateType="Service/Arrivals" MinStay="4" MaxStay="21">
<Rate Amount="103.46" Adults="1" Children="2" ApplyType="PU" ApplyCycle="PerDay" StartDate="2019-01-14" EndDate="2019-02-21" ExtraBed="1" SharedBed="1">
<Rate Amount="102.00" Adults="2" Children="0" ApplyType="PU" ApplyCycle="PerDay" StartDate="2018-11-01" EndDate="2019-01-13">
```

## Rate tags

This section contains information of the offers and extras already applied to the rate.

**ExtraIncluded**: contains the codes of the extras included in the price

**OfferApplied**: Contains the codes of the offers applied. Offer code classification can be found in the Appendix section.

**BookingCode**: Code to be sent to the provider in order to specify an offer has to be applied, this value is informative and it is not required to be included in the booking.

```
<RateTag ExtraIncluded="EXTRABED" OfferApplied="EBO1,FSO1"/>
```

## Pax Ages

This section includes the pax age range of the children included in the rate.

```
<Ages>
        <Age PaxType="CHD" MinAge="2" MaxAge="7"/>
        <Age PaxType="CHD" MinAge="2" MaxAge="7"/>
</Ages>
```

## AdditionalRates

Extras, offers, fees and taxes that are not included in the base rate.

Extras: Additional services that are either optional or compulsory

Offers: Offers not applied to the base rate due to any condition. I.E. stay based offers for PerDay rates. Must be calculated if the conditions and restrictions apply

Tax and Fees: Additional Fees and Taxes required if the conditions and restrictions apply

These are the elements included at this level:

**Type:** indicates if it’s a Extras, Offers, Fees or Tax

**ApplyDateType** Defines the application dates of the additional rate, possible values Arrivals , Stay, Arrival+Departure

**Apply:** Indicates if the concept is Compulsory or optional. Compulsory concepts must be added to the calculation if the restrictions/conditions apply. Default value when not indicated is Mandatory.

<AdditionalRate Type="Extra" Code="CAR" Name="Class A Car" Description=" Class A Car" Apply="Optional">

This node hosts the same Rates/Rate structure found in the base rates section, so the same concepts included in the Rates/rates nodes are applicable with the addition of:

**SellingDaysFrom / SellingDaysTo** : Indicates the number of days before the service start the booking must be committed, applicable to Early Booking Offers only

**Percent**: Percentage value to apply to the rate

**ApplyMethod**: Indicates if the offer/supplement applies to everything, only the room, only the board upgrade, etc. Possible Values: All, StockUnit (room), SubService (Board), Extra, StockUnitSubService (Room+Board), StockUnitExtra (Room + Extra), SubserviceExtra (Board+Extra). Default value in case attribute is missing is “All”

## Restrictions

The application of the AdditionalRates is restricted to the elements described in the restriction section, Room, Board and RatePlan are the elements candidate as restrictions. The restriction applies to all possible combinations generated

```
<Restrictions>
        <Room Code="RMSD0000N"/>
        <Room Code="RMSD00000"/>
        <Board Code="AI"/>
        <Board Code="HB"/>
        <RatePlan Code="STD"/>
        <RatePlan Code="STD2"/>
</Restrictions>
```

## Availability Data

Availability data section contains all the availability conditions, grouped per room and category. There 3 main categories, release, restrictions and allotment:

Release: minimum amount of time required for the booking prior to the service date

Restriction: Arrival, departure and stay restrictions, can include a pattern of day of week.

Allotment: Allotment status per date range, including its status.

Elements found in the availability data:

**StartDate / EndDate**: date range the condition applies, used in all availability elements

**Board, RatePlan**: Board and/or rateplan the condition applies to, used in all the availability elements

**Cutoff**: Period of time required for the booking prior to the service start. It is expressed as a XML duration.

**Type**: scope of the restriction, can be Arrival, Departure or Stay

**DOW**: Day of week the restriction applies. Consists of a 7 digit pattern, one for each day of the week. Value 0 means no and value 1 means yes. Pattern starts with Monday.

**Status**: Can be Open, Closed, StopSale, SoldOut, Request or FreeSales. Used in the restrictions and allotment to specify the status.

```
<Availability Category="Closeout" StartDate="2018-03-01" EndDate="2018-10-30"  Board="HB" RatePlan="STD"/>
<Availability Category="Release" Cuttoff="P7D" StartDate="2018-03-01" EndDate="2018-10-30"
Room="RMSD0000N" Board="HB" RatePlan="STD"/>
<Availability Category="Restriction" Type="Arrival" Status="Closed" DOW="0001001" StartDate="2018-03-01"
EndDate="2018-10-30" Room="RMSD0000N" Board="HB" RatePlan="STD"/>
<Availability Category="Allotment" Status="Open" StartDate="2018-03-01" EndDate="2018-10-30"
Room="RMSD0000N" Board="HB" RatePlan="STD"/>
```

## Policies

Cancellation policies that might apply to booking cancellations. Any booking cancelled the same day, will get a 100% cancellation fee (whole booking), any booking outside the cancellation policies is considered free of charge.

Elements found in the cancellation policies:

**StartDate / EndDate** : date range the cancellation policy applies

**ChargeType:** Percent or Amount, determines if the value in charge attribute is a amount or a percentaje

**ChargeApply**: Number of days penalized. If the value is higher than the booking stay, the full booking is penalized

**OffSet**: number of days prior to the service start the cancellation policy applies.

**RatePlan**: RatePlan the cancellation policy applies, If the value is not present, it applies to all RatePlans

Example of a 100% cancellation fee (non refundable room)

<CancellationPolicy StartDate="2018-03-01" EndDate="2018-10-30" ChargeType="Percent" Charge="100.00" Room="RMSD0000N"/>

Example of a cancellation fee of 2 full days (100% of 2 days) for bookings cancelled 3 (or less) days prior service start, applies to RatePlan STD only

<CancellationPolicy StartDate="2018-03-01" EndDate="2018-10-30" ChargeType="Percent" ChargeApply="P2D" Offset="P3D" Charge="100.00" RatePlan="STD"/>

Example of a cancellation fee of 1 full day (100% of 1 day) for bookings cancelled 6 (or less) days prior service start, applies to RatePlan STD only

<CancellationPolicy StartDate="2018-03-01" EndDate="2018-10-30" ChargeType="Percent" ChargeApply="P1D" Offset="P6D" Charge="100.00" />

Example of a cancellation fee of a fixed amount (35.00 €) for bookings cancelled 15 (or less) days prior service start

<CancellationPolicy StartDate="2018-03-01" EndDate="2018-10-30" ChargeType="Amount" Offset="P15D" Charge="35.00"/>

In case more than one cancellation policy is applicable, the most restrictive one applies. I.E.

<CancellationPolicy StartDate="2018-03-01" EndDate="2018-10-30" ChargeType="Percent" ChargeApply="P1D" Offset="P6D" Charge="100.00" />
<CancellationPolicy StartDate="2018-03-01" EndDate="2018-10-30" ChargeType="Percent" ChargeApply="P2D" Offset="P3D" Charge="100.00" RatePlan="STD"/>

With these conditions:

Booking cancelled same day will get a 100% cancellation fee (Whole booking)

Booking cancelled 2 days prior to service date will have a fee of 100% of 2 days

Booking cancelled 4 days prior to service date will have a fee of 100% of 1 day

Booking Cancelled 7 days prior to service date won’t have any fee

## Additional Rate calculation examples

This section will describe in detail how to do a calculation of an additional rate element and how the concepts are expressed. Both and Extra and an Offer are used as examples

**EXTRA New Year's Eve gala dinner**

Extra is identified in the **Type** element with a code and a description of the service. **Apply** attribute specifies the extra is not mandatory; it can be booked with an additional fee.

The rates section includes 2 rate elements that defines the different rates for adults and children, identified with the **PaxType** attribute. Pax age restrictions are specified as **MinAge** and **MaxAge** to cover specific per age range rates. In this specific case, the child rates are for an age range from 3 to 11 years old, both inclusive.
The extra applies per person and per day, as defined in the **ApplyType** and **ApplyCycle** attributes, so it needs to be calculate accordingly with the number of pax and dates. **StartDate** and **EndDate** indicates the date range the extra can be booked, in this specific case the extra is just available for a single day. The amount of the extra is defined in the **Amount** attribute.

```
<AdditionalRate Type="Extras" Code="NYE" Name="New Years Evening Party" Description="Pending description"
Apply="Optional">
        <Rates>
                <Rate Amount="55.00" ApplyType="PP" ApplyCycle="PD" StartDate="2019-12-31"
        EndDate="2019-12-31" PaxType="ADT">
                        <RateTag BookingCode="PREMIUMDINNER"/>
                </Rate>
                <Rate Amount="15.00" ApplyType="PP" ApplyCycle="PD" StartDate="2019-12-31"
        EndDate="2019-12-31" PaxType="CHD" MinAge="3" MaxAge="11"/>
        </Rates>
</AdditionalRate>
```

Calculation for a booking of 2 adults and 2 children (ages 2 and 5):

Amount * number of pax (ApplyType=PP) * number of days (ApplyCycle=PD)

Adult = 55 * 2 * 1 = 110 EUR
Child 5 years old = 15 * 1 * 1 = 15 EUR
Child 2 Years old = Not Applicable

Total extra = 125 EUR

**OFFER Free stay offer 7x5**

Offer is identified in the **Type** element with a code and a description of the service. **Apply** attribute is missing indicating it is mandatory (default value); it is included in an OfferGroup. **ApplyDateType** indicates it is calculated based on the Arrival date (arrival date should be in the Start/end date range)

The rates section defines the offer is assigned to an **OfferGroup** with code 12. **MinStay** and **MaxStay** indicates maximum number of stay days in the booking in order to qualify for this offer, in this case stay must be from 7 to 13 days, both included.
**PaxType** attribute is missing indicating it applies to any pax type.
The offer applies per person and it would be applicable every 7 days, as defined in the **ApplyType** and **ApplyCycle** attributes, so it needs to be calculate accordingly with the number of pax and stay. **ApplyDaysFrom** and **ApplyDaysTo** indicates the affected days will be the 6th and the 7th day in the cycle. In this specific case, as the maximum stay is 13 days, it can be applied only once and days 6 and 7 of the stay will get the offer specied.
**StartDate** and **EndDate** indicates the date range the offer can be booked, in this case the offer is available for the whole year. The amount of the offer is defined in the **Percent** attribute, in this case is a 100 percent off.

```
<AdditionalRate Type="Offers" Code="FSO" Name="Free Stay Offers" Description="Stay 7 to 13 days and get every 7 days 2 for free" ApplyDateType="Arrivals">
	<Rates OfferGroup="12" MinStay="7" MaxStay="13">
		<Rate ApplyDaysTo="7" ApplyDaysFrom="6" ApplyType="PP" ApplyCycle="7D" StartDate="2019-01-01" EndDate="2019-12-31" Percent="-100.00">
			<RateTag BookingCode="99663PCODE"/>
		</Rate>
	</Rates>
</AdditionalRate>
```

Calculation for a booking of 2 adults, stay of 12 days with a daily price of 100€ the first 6 days and 120€ the last 6 days

Per day rate before offer: 100-100-100-100-100-**100-120-**120-120-120-120-120

Total = 1320 EUR

Offer applies every 7 days and affects to days 6 and 7. These days gets a -100% offer

Per day rate after offer: 100-100-100-100-100-**0-0-**120-120-120-120-120

Total = 1100 EUR

# Appendix A - Hotel Codes

The hotel codes are structured in 2 possible ways:

Classic, construction based on 3 elements. I.e. in AMTSES0FFG, A stands for “Accomodation”, MTSES for the Incoming Agent (MTS Spain in this example) and 0FFG is a counter.

New destinations, construction based on 4 elements. I.e. in AEGHRG10SY, A stands for “Accomodation”, EG for Country (Egypt in this example), HRG for destination (Hurgada in this example) and 10SY is a counter.

# Appendix B - Hotel Room Codes

Room codes are assembled from various room characteristics: ex. RMSDDBSV00 using the code elements, with the number of positions marked between brackets:

Type(2)|Grade(2)|Base(2)|View(2)|Subtype(1)|Promo(1)

Any room of identical room code, might have different features through the listed <Amenities>.in the OTA_HotelDescriptiveInfo (static data)

Room Codes:

| TYPE | | GRADE | | BASE | | VIEW | | SUBTYPE | | PROMO | |

## Appendix C – Hotel Board codes

| Board | Description |
|---|---|
| AI | All Inclusive |
| AI+ | All Inclusive + additional services |
| AI- | All Inclusive Light |
| BB | Bed & Breakfast |
| DO | Dinner Only |
| FB | Full Board |
| FB+ | Full Board + additional services |
| HB | Half Board |
| HB+ | Half Board + additional services |
| LO | Lunch Only |
| RO | Room Only |
| SC | Self Catering |
| AP | Acording to Programme* |

*This board is used in accomodation packages only.

# Appendix D – Offer Codes

| Offer codes | |
|---|---|
| DPO | Special date offer |
| LMO | Last minute offer |
| AOO | adult only offer |
| COO | child only offer |
| LSO | long stay offer |
| EBO | early booking offer |
| EBR | early booking offer (rolling) |
| EBF | early booking offer (flat reduction) |
| FRU | Free room upgrade |
| FSO | Free stay offer |
| INF | Free infant |

## Appendix E – RatePlan codes

Our system provides different options to deal with multiple prices for the same room, expressed in RatePlans. With these options, we target to cater for need of simplicity, best-price logic (in general preferred by B2C partners) or provide all options (in general preferred by B2B partners).

RatePlanCode consists of five alphanumeric characters where each position provides an information regarding other factor affecting the rate. From these five elements, first two elements are shown just for the Distributor's product management purposes (TO/OTA), only the last three are visible and form part of the room description for the final client to explain why the same room is bookable with different prices.

The components, descriptions and Explications are listed in Appendix K.

A RatePlan code is constructed from below RatePlan code elements:

Rate Type(1)|Rate Group(1)|Rate Refund(1)|Rate Sub Type(2)

Example: BHSP2 – BAR Rates - Hotel only - Semi-flexible – Promotional Rate 2

There is also a possibility of duplicating RatePlan which already exists in the contract. In this case the "." character, and a number starting with 1, and then subsecuently every iteration.

Example: BHSP2.1

Where in **Rate Type** column the elements mean:

**0** → If the character is 0 would say that the value has been not defined – the rate stays unchanged like in the basic contract edition.

**B** → Bar - best available rates (changing due to rate updates)

**S** → Static – unchanged contract rate till the time of a promotion or an offer introduction

**F** → FIT - free individual traveller rates

R → Retail – advised end-price

**Rate Group**:

**H** → Hotel only - rates valid when booking contains only hotel

**P** → Packaging - rates valid when booking contains hotel + another product

**O** → Opaque - hotel rates must not be visible for end consumer

**R** → Rack - walk-in hotel rates for end consumer

**Rate Refund**:

**N**→Non refundable - immediately after booking; Nonrefundable rooms can be also still communicated within the RoomCode as a last character like it used to was (RMSD00000N)

**S**→ Semi-flexible – cancellation without fees up to 12 hours after booking

**F**→ Flexible – cancellation without fees up to 24 hours after booking

And in **Rate Sub Type**:

**A→** Advanced Purchase - booking has to be paid before confirming

**P→** Promotion rate

Rate Type(1), Rate Group(1), Rate Refund(1), Rate Sub Type(2)

| Rate Type | | Rate Group | | Rate Refund | | Rate Sub Type | |
|---|---|---|---|---|---|---|---|
| **Code** | **Description** | **Code** | **Description** | **Code** | **Description** | **Code** | **Description** |
| 0 | Rates | 0 | undefined | 0 | Undefined | 00 | Undefined |
| R | Retail rates | H | Hotel only | N | Non refundable | A0 | Advanced Purchase |
| S | Static rates | P | Packaging | S | Semi-flexible | A2 | Advanced Purchase 2 |
| F | FIT Rates | O | Opaque | F | Flexible | A3 | Advanced Purchase 3 |
| B | BAR rates | R | Rack | | | P0 | Promotional Rate |
| | | | | | | P2 | Promotional Rate 2 |
| | | | | | | P3 | Promotional Rate 3 |
| | | | | | | P4 | Promotional Rate 4 |
| | | | | | | P5 | Promotional Rate 5 |
| | | | | | | P6 | Promotional Rate 6 |
| | | | | | | P7 | Promotional Rate 7 |
| | | | | | | P8 | Promotional Rate 8 |
| | | | | | | P9 | Promotional Rate 9 |
| | | | | | | 01 | [1] |
| | | | | | | 02 | [2] |
| | | | | | | 03 | [3] |
| | | | | | | 04 | [4] |
| | | | | | | 05 | [5] |
| | | | | | | 06 | [6] |
| | | | | | | 07 | [7] |
| | | | | | | 08 | [8] |
| | | | | | | 09 | [9] |

# Versions

| Version | Release date | Editor | Release notes |
|---|---|---|---|
| V1.0 | 08/02/2019 | Alberto Palmer | Initial version |
| V1.1 | 18/03/2019 | Alberto Palmer | Added Extra / Shared bed concept<br>Availability data grouped by room and Category<br>Category Closeout removed |
| V1.2 | 05/04/2019 | Alberto Palmer | Amended ApplyCycle concept along with ApplyDaysFrom/To definition<br>ApplyType values changed from PerPax-PerUnit to codes PP-PU<br>Changed PaxType values from Adult,Child,Infant to codes ADT, CHD and INF<br>Added BookingCode concept<br>Added ApplyDateType concept<br>Added OfferGroup concept<br>Added detailed explanation of Extra and Offer in new section |
| V1.3 | 11/04/2019 | Alberto Palmer | Added ApplyMethod in the documentation, already in schema |
| V1.4 | 30/04/2021 | Sam Jaarsma | Updated RatePlan description and appendix |
