RETRIEVE DATA VIA REST-SERVICE **4**
Communication protocol *4*
Endpoint and credentials *4*
Request *4*
Response *5*
Images *21*
Error scenarios and troubleshooting *22*
VERSIONS **23**

OBJECTIVE

This document covers the description of services to get customer journey information from the MTS system.

Communication protocol

All messages are implemented as POST-REST Services with JSON as application protocol in the body.

We are following the Code Style guide of google defined here

https://google.github.io/styleguide/jsoncstyleguide.xml?showone=Property_Name_Format

Endpoint and credentials

This is the live environment endpoint, this endpoint is public and it is not blocked by IP.

https://cj.axisdata.net/api/booking

credentials (userName and password) are the same used to access Axisdata XML API, in case there's an active integration with the XML API, the same user and password used in the XML requests can be used for this interface, otherwise a new set of credentials will be created and provided

Request

To request information about the transfer service simply provide "distributorCode", and "bookingReference" along with the credentials (user and password) provided by Axisdata. The request can include a language value to indicate the preferred language of the communication in the response. Please contact Axisdata before selecting a language to confirm the coverage. In case language is not provided or there's no coverage, EN will be used as default.

Response includes available activity offers by default, the inclusion of these offers can be controlled by an optional parameter called includeOffers. If the parameter its not included, value true is taken as default to keep backwards compatibility

The request must be sent as Http-POST method with the JSON-RQ in its body.

```
{
  "username": "xxxx",
  "password" : "yyyyy",
  "distributorCode" : "TEST",
  "bookingReference" : "123456",
  "language" : "EN",
  "includeOffers" : true
}
```

Attribute	Description	Data Type
username	Username, provided by Axisdata	String
password	Password, provided by Axisdata	String
bookingReference	Booking reference	String
language	Preferred language, 2 char	String
distributorCode	Distributor code	String
includeOffers	Controls if the offers are included or not	Boolean

Response

Response includes the actual status of the booking including additional details of the destination, contact and recommended activities. The response data is divided into three main sections, general, booking and offers

Language: Language included in the request affects big part of the response, as it will include any multi language supported concept translated. Types, texts and descriptions will be returned in the requested language, this means the booking item types may be returned in the selected language, this needs to be taking into account for the item type identification. In case the concept its not supported in the requested language, English (EN) will be used as default.

General: This section presents a personalized welcome message of the journey. It contains a header with a personalized saludation to the lead pax and the message in the body section. The body section may include HTML formatting tags.

This section includes a collection of images to be used in the welcome area. Image link will return a Base64 encoded image object.

```
"general": {
    "header": "Find out all the information you need for a safe and enjoyable holiday",
    "body": "Welcome to Mallorca \n<br/>\n<br/>\nOn behalf of your tour operator and the MTSGlobe team,we would like to give you a warm welcome!\n<br/>\n<br/>\nWe are here to ensure that you get the most out of your holiday. As local specialists, we would like to assure you that our expertise and inside knowledge of our destination and its attractions will guarantee that you have a great time and help you create unforgettable memories.\n<br/>\n<br/>\nTwo days prior to your departure, your pick-up time will be available in the app in the return transfer section. \n<br/>\n<br/>\nShould you have any questions, please do not hesitate to contact us at any time.\n<br/>\n<br/>\nWishing you a great holiday!",
    "images": [
      {
        "type": "main",
        "link": "https://services.mtsglobe.com/cj/images/loginteaser.png"
      }
    ]
  }
```

Attribute	Description	Data Type
header	Beginning of welcome message	String
body	Long-Text description of welcome	String
type	Image type “main” or “additional”	String
link	Image link	String

Booking: Booking section contains the details of the journey, destination info and contact details. The booking section is divided in 4 areas: Booking details, Destination details, Items and Passengers.

Booking details: this area includes the booking reference, journey dates and Resort.

```
"booking": {
    "headerId": 36693388,
    "bookingReference": "13754807",
    "resortOffice": "PMI",
    "resortOfficeId": 127,
    "startDate": "2020-07-09",
    "endDate": "2020-07-21"
```

Attribute	Description	Data Type
headerId	Internal id of TravelKISS	Number
bookingReference	Reference of customer	String
resortOffice	3-Letter code of destination	String, 3 chars
resortOfficeId	internal code of destination	Number
startDate	Start date of the booking	String format YYYY-MM-DD
endDate	End date of the booking	String format YYYY-MM-DD

Destination details: This section contains details of the destination of the journey, including general info, general and emergency contacts, Covid info and a general image of the destintion.

Documents element contains a collections of downloadable documents related to the destination, including safety regulations. Every document is defined by a type, normally a PDF, and a link to download the file. Files might not be in the requested language

This section also includes a collection of images of the destination, images are provided as a link that returns a Base64 encoded image object.

Contact details includes a collection of available communication methods for the end costumer to use. It will include phone numbers, mail, and other communication methods and their details. Only phone communications are included at the moment

Destination regulation element has a set of FAQs that covers any regulations applicable in the destination, specially for COVID-19 and documents related to the destination regulations.

All Information sections may contain HTML formatting tags.

```
"destinationDetails": {
      "info": "We hope you'll enjoy your stay in the destination. We collected some information about
the destination which can be studied in the pdf attached +  some details of the destination",
      "documents": [

          }
        ]
      }
    }
```

Attribute	Description	Data Type
info	Destination general info	String
documents	Collection of destination documents	
type	Type of the document, normally PDF	String
link	Link of the document to download	String
images	Collection of images of the destination	
type	Type of the image, “main” or “additional”	String
link	Link of the image	
contactDetails	Section covering contacting info	
location	Main contact location in the destination	String
contacts	Collection of contact methods	
type	Type of contact, “phone number”, “email”	String
emergencyContacts	Collection of phone emergency contacts	
type	Type of contact, “police”, “ambulance”, etc	String
value	Value of the phone number	Number
destinationRegulation	Section covering the regulations applicable	
info	General info of the destination regulation	String
detail	Collection of regulation sections	
header	Header of the section	String
body	Collection of FAQs of the section	
code	FAQ code	String
question	Question of the FAQ	String
mainResponse	Main response of the FAQ	String
secondaryResponse	Additional details of the response	String
documents	Collection of documents	
type	Type of the document, normally PDF	String
link	Link of the document to download	String

Items: This section hosts all the booking items included in the booking. Every item will include the details related to its type, so item structures are dynamic. Any item in a booking no longer active (cancelled) won't be included, only active booking items are to be returned.

Accomodation elements: Every booked room is considered and item, multi room booking will contains an element per room booked. The item includes all passengers in the room. This item will include the following details:

Hotel and room details
Service dates
Location of the Property

```
"type": "Hotel room",
"code": "AMTSGR3F2G",
"info": "Hotel eleni Palace Apts",
"detail": "Double standard, All inclusive",
"startDate": "2020-07-09",
"endDate": "2020-07-20",
"location": {
"address": "12 Milou, 814 14, Heraklion",
"latitude": "35.33689",
"longitude": "25.06779"}
```

Attribute	Description	Data Type
type	Item type, "Hotel room" in EN language	String
code	Hotel code	String
info	Hotel name	String
detail	Room and board description	String
startDate	Start date of the service, check-in	String format YYYY-MM-DD
endDate	End date of the service, check-out	String format YYYY-MM-DD
location	Section covering the service location	
address	Hotel address	String
latitude	Geo location, latitude	Number
longitude	Geo location, longitude	Number

Transfer elements: Every service is considered an item. An inbound transfer or an outbound transfer are considered separated services, so a transfer in + out will be expressed as 2 transfer items. The item includes all the passengers in the service. The item will include the following details:

Service code and description
Service date
Collection of images of the service
Flight details
Pickup details, including detailed info of the pickup and images of the pick points (location map)
Vehicle details

```
{
        "type": "Inbound Transfer",
        "code": "TRGRHERHER",
        "info": "Airport to Hotel eleni Palace Apts",
        "detail": "Shared transfer",
        "startDate": "2020-09-07",
        "endDate": "2020-09-07",
        "images": [
          {

          "vehicleNumber": "123",
          "vehicleLicensePlate": "XXXX",
          "vehicleDriver": "MUZAFFER EROL",
          "QRCode": "TE9WSHwxMjM0NTY3ODkwfDIwMjMwODE1fDIwMjMwODIzfDQ="
        }
```

Attribute	Description	Data Type
type	Item type “Inbound Transfer” or “Outbound Transfer” in EN language	String
code	Transfer service code	String
info	Service description	String
detail	Service detail, “Shuttle”, “Private”, etc	String
startDate	Start date of the service	String format YYYY-MM-DD
endDate	End date of the service	String format YYYY-MM-DD
images	Collection of images of the service	
type	Type of the image, “main” or “additional”	String
link	Link of the image	String
flight	Section covering the flight details	
company	Flight company, IATA 2 char code	String
number	Flight number	Number
departure/arrival	Departure and arrival details sections	
airport	Airport 3 char IATA code	String
date	Flight departure/arrival date	String format YYYY-MM-DD
time	Flight departure/arrival time	String format HH:MM
pickup	Pickup details section	
info	Info of the pickup process	String
Date	Date of the pickup	String format YYYY-MM-DD
time	Time of the pickup	String format HH:MM
location	Section covering the pickup location	
address	Pickup address	String
latitude	Geo location, latitude	Number
longitude	Geo location, longitude	Number
images	Collection of pickup images	
type	Image type, “map” , “booth”	String
link	Image link	String
vehicleNumber	Vehicle identifier	String
vehicleLicensePlate	Vehicle license plate	String
vehicleDriver	Driver name	String
QRCode	QRCode identifying the service-Placeholder for future use	String

Activity elements: Every activity is considered an item. The item includes all the passengers attending the activity. The item will include the following details:

Activity code and description
Service dates
Collection of images of the service
Pickup details, including detailed info of the pickup and images of the pick points (location map). Pickup info is provided if applicable, tickets wont have pickup details

This section is controlled by the includeOffers parameter in the request, see request section.

```
 "type": "Activity",
        "code": "XAXXXXXX",
        "info": "Coves del Drach",
        "detail": "Entrance + transfer",
        "startDate": "2020-09-12",
        "endDate": "2020-09-12",
        "images": [
          {
            "type": "main",
            "link":
"http://tkimages.axisdata.net/ImageConverter.php?size=display&amp;height=400&amp;hotel=AMTSGR3F2G&amp
;filename=20130110_142817.jpg"
          }
        ],
        "pickup": {
          "info": "activity pickup info",
           "date": "2020-09-12",
          "time": "10:00",
          "location": {
            "address": "pickup address, meeting point",
            "latitude": "35.33689",
            "longitude": "25.06779"
          },
          "images": [
            {
              "type": "map",
              "link": "MAP IMAGE LINK"
            },
            {
              "type": "other",
              "link": "OTHER IMAGE LINK"
            }
          ]
        }
```

Attribute	Description	Data Type
type	Item type “Activity” in EN language	String
code	Activity code	String
info	Activity description	String
detail	Activity detail, “ticket”, “ticket + transfer”	String
startDate	Start date of the service	String format YYYY-MM-DD
endDate	End date of the service	String format YYYY-MM-DD
images	Collection of images of the service	
type	Type of the image, “main” or “additional”	String
link	Link of the image	String
pickup	Pickup details section	
info	Info of the pickup process	String
Date	Date of the pickup	String format YYYY-MM-DD
time	Time of the pickup	String format HH:MM
location	Section covering the pickup location	
address	Pickup address	String
latitude	Geo location, latitude	Number
longitude	Geo location, longitude	Number
images	Collection of pickup images	
type	Image type, “map” , “other”	String
link	Image link	String

Other elements: Additional products included in the booking (extras, handling services, meet and greet services, etc) will be included as well. The item will include the following details:

product code and description
Service dates
Collection of images of the service

```
"type": "Inbound Airport Services",
"code": "GAEDXB92LI",
"info": "Marhaba Services Dubai International Airport",
"detail": "GoldMeet & Greet Service, Inbound",
"startDate": "2020-11-13",
"endDate": "2020-11-13",
  "images": []
```

Attribute	Description	Data Type
type	Item type, variable depending of the service	String
code	Product code	String
info	Product name	String
detail	Product description	String
startDate	Start date of the service, check-in	String format YYYY-MM-DD
endDate	End date of the service, check-out	String format YYYY-MM-DD

Passengers: This area include all the passengers present in the booking and their details. The responsible of the booking is identified with the “leadPax” attribute. There’s not an explicit link of which passengers are included in an item, passengers may be linked to just one or more booking items. Online check-in details included in case service is available.

```
{
  "firstName": "Bill",
  "surName": "Gates",
  "paxType": "ADT",
  "title": "H",
  "age": "55",
  "leadPax": true,
  "checkInStatus": "Pending"
},
{
  "firstName": "Steve",
  "surName": "Wozniak",
  "paxType": "ADT",
  "title": "H",
  "age": "55",
  "leadPax": false,
  "checkInStatus": "Confirmed",
  "checkInDate": "2020-01-12",
  "checkInCode": "1234567abcde"
}
```

Attribute	Description	Data Type
firstName	Passenger first name	String
surName	Passenger surname	String
paxType	Indicates type of pax	3 letter String, possible values ADT (Adult), CHD (Child), INF (Infant)
title	Salutation of Pax coming from customer	String
age	Passenger age	Number
leadPax	Indicates is passenger is the booking lead	Boolean
checkInStatus	Online check-in status, Pending or Confirmed	String
checkInDate	Date of the online check-in	String format YYYY-MM-DD
checkInCode	Check In confirmation code (if available)	String

Offers: this section includes a collection of activities and extras available in the area the hotel has been booked. This section contains the product code, product name, a complete description of the prodcut and an image. See image link construction details in “images” section

Images are included via a link to the image server, they can be stored locally or hotlinked, but local storage is reccomended for performace reasons.

A link to the activities web service can be constructed based on the activity code. This link will provide a portal were available activities can be booked *This functionality its not avaialbe at the moment*

```

Images

The TravelKISS platform includes maintenance of images in standardized sizes and qualities. Images can be downloaded upon change and stored in the partner system or hot linked if necessary

There are 4 image sizes in two qualities. If the original image has of sufficient quality, the images will be converted to the following standard sizes, quality 1 and 2 are for catalog production, where images 3 and 4 are for internet use:

1. 2400 pix width or height, classified as “print_lead” (circa 2,5 MB)
2. 1200 pix width or height, classified as “print” (circa 1 MB)
3. 450 pix width or height, classified as “display” (circa 130 KB)
4. 200 pix width or height, classified as “thumbnail” (circa 40 KB)

Aspect ratio of the original image is maintained, no automatic cropping or manipulation is applied. A mild compression is implemented.

NOTE: Different image sizes might be available than specified in above 4 categories, if the original image was not meeting the minimum “Display” requirements (i.e. “ImageFormat Width = "102" Height = "386"”).

How to construct an image download request:

HotelCode	Product code
DimensionCategory	Base quality: print_lead, print, display, thumbnail
URL	File name
Height	Height in pixels, image will be stretched to this size

http://tkimages.axisdata.net/ImageConverter.php?size=**DimensionCategory**&height=**Height**&hotel=**HotelCode**
&filename=**URL**

Links of the images provided in the response can be amended in order to change the quality and size to fit the needs of the frontend

Error scenarios and troubleshooting

Any error identified in the request process will be returned in the response with a success value set to false.

```
"success": false,
"error" : "Error description"
```

These are the most important errors and causes that can be found in our JSON interface.

Authentication error

Case: User and/or password re incorrect or not provided

Error returned: "Username or password invalid"

Action: Verify the username and password are correctly included in the request. Verify the username and password values does match the values provided by Axisdata

Booking cannot be found

Case: Provided booking reference cannot be found

Error returned: "Booking reference not found"

Action: Check the bookingReference value. Verify the bookingReference correcponds to the distributorCode provided. Verify the booking is still active and not cancelled

Invalid request

Case: Provided request does not match the specification

Error returned: "Invalid request format"

Action: Check all the mandatory sections in the request are included. Check the fields follow the code style guide. Check the message is included in the message body.

Invalid distributor code

Case: Provided distributorCode is not valid

Error returned: "Invalid distributor code"

Action: Check the distributorCode value matches the value provided by Axisdata.

Date	Version	Name	Revision
08/10/2020	1.0	Alberto Palmer	Initial version
25/11/2020	1.1	Alberto Palmer	Added Other products section Updated examples with wrong date format
10/12/2020	1.2	Alberto Palmer	Added check-in details
11/02/2021	1.3	Alberto Palmer	Removed destination regulations PDF from the documents section Added detail section in destination regulations covering the regulations in plain text Added highlights in offers section Added pickup location of inbound transfer services in address section
18/02/2021	1.4	Alberto Palmer	Extended destination regulations info as FAQs Added offer links Updated web service endpoint
09/06/2021	1.5	Alberto Palmer	Added Language section to cover implications in the response
19/07/2023	1.6	Alberto Palmer	Added Pickup date in response
28/08/2023	1.7	Alberto Palmer	Added QRCode in transfer services Added Parameter to restrict offers in response
