# 1. Introduction

The OTS FlatFile is developed to allow customers to store a limited set of prices and availability without any calculation logic. As portfolio is Client specific and client specific marketing actions, guarantees, etc need to be considered, the OTS FlatFile can only be used for the ClientID it has been generated for. It is meant as an immediately searchable cache file. There are two versions available: version 1 is without RatePlans and version 2 is accommodating RatePlans.

The file format provides for all hotels in the client portfolio, all rooms and boards available, end-prices for all arrival dates, all occupancies and all possible length of stays up to 28 days.

This results to an extreme volume of data. Example:

- 5.000 hotels
- Average 3 room types
- Average 3 boards
- Length of stays included: 25 (3-28)
- Arrival days included: 365 (as not all hotels have a valid contract at any given moment for an entire year ahead in our system, we calculate with 330 days – 10%)
- Adults included: 1-3 (for calculation 2.6 is used as most rooms fit 3 adults, but single use is frequently a specific room)
- Children included: 1 of 5 years old (for calculation 1.7 is used, assumed all rooms fit 2A+1C, none of the rooms fit 3A+1C)

This exaggerated example results to circa 1.640.925.000 lines to be generated and processed for every single delivery, if all hotels would have availability for all arrival dates. This also shows that the FlatFile principle is not fit for systems that are required to produce search results for any occupancy – the above example does not include 4A, 2A+2C, etc. It also does not provide price accuracy nor availability for any search with a child of an age other than 5. Please refer to our Notification Based model for these appliances.

Ahead of installation of the FlatFile, limitations are agreed with the client working with this format, to limit the data size and to narrow the delivery to the exact concepts that will be processed. This avoids repetitive generation of obsolete data, causing a longer processing time, both in generation on our side as well as on the client side, reducing the accuracy of the file. An exact and extensive analysis of fields and values to be processed, has to be provided, before any new FlatFile is installed.

For example the first length of stay (LOS) is agreed to set to 3 nights and some LOS up to 10 nights are included, plus 14 nights and 21 nights. Mostly occupancies are reduced to 2 adults, 2 adults and 1 child and or infant. Note: for searches outside these LOS or occupancies, the partner would not be able to return availability and could redirect searches to our system. Most advertising systems, do not require inclusion of any children prices, as only the adult price is considered. This originates from varying child reductions by age, but also by first, second child, etc, resulting to a trade-off between an immense explosion of data to attempt to publish seamlessly correct child rates, versus the option to query these occupancies in real-time.

Another option is to compute some concepts from the delivered data (i.e. if we agreed not to deliver data for stays of 15 days and more, the price from 14 days can be used, divided by 14 and multiplied by the searched number of days over 14. This can lead to inaccuracies.

The generation time, transport volume and processing time is directly related to the amount of calculated end-prices that are included in the file. The smaller the file and the nearer the file is delivered to the start of processing, the better the price and availability consistency between the advertised PriceLines based on the FlatFile and the availability/pricing in the real time booking process. Especially in last-minute booking season, this is an important aspect for booking agents.

For timing and processing reasons, it is important to consider that our destinations have the ability to insert stop-sales that are immediately effective. But the vast majority of stop-sales are inserted with an activation time of 23h00 local time, fully processed in peak-season around midnight.

This narrows the ideal generation time to an extremely small window, usually from 00:00 to 06:00 to produce all FlatFiles, causing an extreme peak-load on our systems. To compensate for the large investment to enable this process, each new FlatFile has to generate a substantial amount of bookings to be cost effective.

## 2. FlatFile schedule parameters

| parameter | value | description |
|---|---|---|
| JobName | NOTIFY_OTSFF_CLIENTID | |
| Client | TEST | ClientID |
| Version | 01 or 02 | Version 01 is the format used up to April 2021 without RatePlans. Version 02 is the same format, however the Roomcode field is 20 chars and there is a new RatePlan field of 10 chars. |
| StartDate | Today+1 | First arrival date included |
| EndDate | Today+200 | Last arrival date included (365 is the max value) |
| FtpActive | TRUE | Send by FTP active |
| FtpServer | sftp.axisdata.net | FTP for delivery |
| FtpDir | / | FTP directory for delivery |
| MinAdt | 2 | Start range of Adults to be included |
| MaxAdt | 2 | End range of Adults to be included |
| MinChd | 0 | Start range of Children to be included |
| MaxChd | 0 | End range of Children to be included |
| ChdAge | 5 | Age used to compute the price of children |
| MaxAdtChd | 4 | Max number of pax (Max=6) |
| CheapestRoomBoard | TRUE/FALSE | True includes only the cheapest room/board per hotel, false includes all room and board available per occupancy (cannot be used in combination with CheapestRoom, CheapestBoard or SpecificBoards) |
| CheapestRoom | TRUE/FALSE | True includes only the cheapest room per hotel (but all boards), false includes all room and board available per occupancy (cannot be used in combination with CheapestRoomBoard, CheapestBoard or SpecificBoards) |
| CheapestBoard | TRUE/FALSE | True includes only the cheapest board per hotel (but all rooms), false includes all room and board available per occupancy (cannot be used in combination with CheapestRoomBoard, CheapestRoom or SpecificBoards) |
| SpecificBoards | SC, RO, AI, AI+ | Only generate lines for these boards (cannot be used in combination with CheapestRoomBoard) |
| Durations | 3,4,7,10,13,14,15,21 | Lengths of stays included in nr of days (the largest LOS is 21, the max number should not exceed 10) |
| OffersSpecified | True or false | Adds 5 chars to each line to identify the offers applied in the price (refer to offer code table) |
| StatusEmail | client@client.com | Email notification upon finishing |

## 3. FlatFile structure

| Field Number | Field | Length | From Pos | To Pos | Type | Mandatory |
|---|---|---|---|---|---|---|
| 01 | Version number | 2 | 1 | 2 | INT | Y |
| 02 | Action | 1 | 3 | 3 | CHAR | Y |
| 03 | Offer Number | 10 | 4 | 13 | CHAR | Y |
| 04 | Hotel code | 17 | 14 | 30 | CHAR | Y |
| 05 | Room code (v01=10 chars) | 35 | 31 | 65 | CHAR | Y |
| 06 | RatePlan code (Not present in v01) | 20 | 66 | 85 | | |
| 07 | Board code | 3 | 86 | 88 | CHAR | Y |
| 08 | Arrival date | 10 | 89 | 98 | DATE | Y |
| 09 | Length of stay | 2 | 99 | 100 | INT | Y |
| 10 | Occupancy total | 1 | 101 | 101 | INT | Y |
| 11 | Occupancy ADT | 1 | 102 | 102 | INT | Y |
| 12 | ADT1 age | 2 | 103 | 104 | INT | N |
| 13 | ADT2 age | 2 | 105 | 107 | INT | N |
| 14 | ADT3 age | 2 | 108 | 109 | INT | N |
| 15 | ADT4 age | 2 | 110 | 111 | INT | N |
| 16 | Occupancy CHD | 1 | 112 | 112 | INT | Y |
| 17 | CHD1 age | 2 | 113 | 114 | INT | N |
| 18 | Occupancy INF | 1 | 115 | 115 | INT | Y |
| 19 | INF age | 1 | 116 | 116 | INT | N |
| 20 | Price | 12 | 117 | 128 | CURR | Y |
| 21 | Currency | 3 | 129 | 131 | CHAR | Y |
| 22 | Remaining rooms | 2 | 132 | 133 | INT | Y |
| 23 | Offers applied | 5 | 134 | 138 | CHAR | N |

Note: incremental updates (changes and additional PriceLines) have not been implemented yet.

## 4. FlatFile details

**01 Version number**

The current version is 02. Version 01 is available to existing customers for backwards compatibility reasons

**02 Record format / Action**

The action field defines the processing of the record:
I: insert
U: update (partial)
D: delete
F: full update (replace)

**03 PriceLine number**

Each PriceLine has a unique PriceLine number within a provider. If a provider wants to full replacement of all PriceLines, these numbers can be assigned by the cache system, otherwise they have to be assigned by the provider. (e.g. partial updates) . The PriceLine number is also used in technical conversations regarding price consistency.

**04 Hotel code**

This section will contain the hotel code. This section is stated for a 17 character codes, some test hotel codes can be less than 17 characters, so empty spaces could be found. See Appendix C for further details

**05 Room code**

Room codes are assembled from various room characteristics like type, grade, view, etc. Tables defining these codes can be found in appendix A.

**06 RatePlan code**

RatePlan codes are assembled from various RatePlan characteristics like type, group, refundability, etc. Tables defining these codes can be found in appendix D.

**07 Board code**

Board codes define the available meal plans “Half Board”, “All Inclusive”, etc. Tables defining these codes can be found in appendix B

**08 Arrival date**

Date of arrival, uses format yyyy-mm-dd

**09 Length of stay**

This is a 2 character number to define the stay, please note 2 character number is forced, i.e. number eight is expressed as 08

**10 Occupancy total**

Total occupancy of the room, this is the total pax limit of the room of any kind of pax.

**11 Occupancy ADT**

Total number of adults

**12-15 ADT Age**

Defines the ages for possible adults in the room, 2 character number. Will be used for future functionality, senior reductions.

**16 Occupancy CHD**

Total number of child.

**17-19 CHD Age**

Defines the age of the child, this field is mandatory in case are occupancy child is defined. i.e. if occupancy CHD is defined as 2, both ages must be defined in section 11 and 12.

**20 Occupancy INF**

Value 1 means up to 1 infant is allowed in the combination (0 or 1 INF), a value of 0 means NO infants are allowed.

**21 INF Age**

Defines the age of the infant, this field is mandatory in case are occupancy infant is defined.

**22 Price**

Price is expressed in the currency defined in section 22. Price format uses dot as decimal separator and a precision of 2 decimals. Decimals are forced, so a price will always have 2 decimals. i.e. 231.00. This value is right aligned.

**23 Currency**

ISO currency code (e.g. EUR, USD, GBP, CHF)

**24 No. Of Free Units Hotel**

No. of free hotel units at the time the PriceLine was produced. (must field)

## 25 Offers applied

Specification of offers applied in this PriceLine total price. i.e. a combinable Rolling Early Booking and a Free Stay Offer was applied. Refer to this table for translation.

| nr | code | description |
|---|---|---|
| 0 | Null | No offer |
| 1 | EBO | Early Booking Offer |
| 2 | EBR | Rolling Early Booking Offer |
| 3 | FSO | Free Stay Offer |
| 4 | LSO | Long Stay Offer |
| 5 | MSO | Minimum Stay Offer |
| 6 | FBU | Free Board Upgrade |
| 7 | SPO | Special Offer |
| 8 | DPO | Special Date Offers |
| 9 | LMO | Last Minute Offer |
| A | AOO | Adult Offer |
| C | COO | Child Offer |

# 5. Examples

When developing the Flatfile, always request an example file generated with your parameters from our INT environment, so that you can test the full flow including making Quotes to test price consistency.

In our INT environment, ClientID TEST is configured to use separate room codes and rateplan codes. This is an example of the OTS Flatfile with that set-up.

ClientID TST3 for separate Rooms/rateplan codes:

```
03F86a6c4144bAMTSES3EUI      AP00T100A0                    -SUP1-B0000        SC 2023-08-1703112800000000011      543.64EUR99

## 6. Generation report via email

Clients email addresses can be added to the daily generation email, which includes a list of hotels that were included in that generation.

The email contains the following information:

Type of generation: AbcQ - FlatFile
Status: Success or Error
Additional info/Errorcode: FlatFile was correctly generated and transferred to the target server.

Parameters:

| | | |
|---|---|---|
| - Client | XXXX | the code of the feed (DistributorID) |
| - Stock group | AC | |
| - Sub services | all | setting for boards included |
| - First date | 2021-04-28 | |
| - Last date | 2022-04-28 | |
| - Durations | 1, 2, 3, 4, 5, 7, 10, 14 | |
| - Min adt | 2 | |
| - Max adt | 4 | |
| - Min chd | 0 | |
| - Max chd | 1 | |
| - Max pax | 4 | |
| - Chd age | 5 | |
| - Offers version | V2 | |
| - Search type | all units | setting for rooms included |
| - Offers specified | false | |

FTP Transfer Details:

| - Emitted datasets | 144462060 | Number of price lines included |

# 7. Appendix A, Room codes

The RoomClassificationCode used in the OTA_HotelAvailRQ (Search) can be any of the “Type” values. Room codes are assembled from various room characteristics: ex. RMSDDBSV00

Subtypes like 0, A, B, etc. define themselves through the listed <Amenities>.in the OTA_HotelInvNotif and OTA_HotelDescriptiveInfo (UNIT). These codes indicate ***”features different from rooms with otherwise identical codes”***. So you may get a RMSDDB0000 and a RMSDDB00A0 and maybe a RMSDDB00B0, where

* RMSDDB0000 is the plain double room
* RMSDDB00A0 lists “BALCONY” under <Amenities>
* RMSDDB00B0 lists “KITCHENETTE” and “JACUZZI” under <Amenities>

A special case arises for room codes containing a Subtype A, B, etc. suffix but do not have any differences in associated amenities. Instead these rooms have **different board bases**, i.e. different meal plans included in their rates. But this is not necessarily indicated by a different Room code with a Subtype.

Room codes are assembled from various room characteristics: ex. RMSDDBSV00 using the code elements, with the number of positions marked between brackets:

**Type(2)|Grade(2)|Base(2)|View(2)|Subtype(1)|Promo(1)**

| TYPE | | GRADE | | BASE | | VIEW | | SUBTYPE | | PROMO | |

# 8. Appendix B, Board codes

| Board | Description |
|---|---|
| AI | All Inclusive |
| AI+ | All Inclusive + additional services |
| AI- | All Inclusive Light |
| AIU | Ultra All Inclusive |
| BB | Bed & Breakfast |
| DO | Dinner Only |
| FB | Full Board |
| FB+ | Full Board + additional services |
| HB | Half Board |
| HB+ | Half Board + additional services |
| LO | Lunch Only |
| RO | Room Only |
| DB | Dinner Buffet |
| SC | Self Catering |
| AP | Acording to Programme* |

*This board is used in accomodation packages only.

# 9. Appendix C, Hotel codes

The hotel codes are structured in 2 possible ways:

Classic, construction based on 3 elements. I.e. in AMTSES0FFG, A stands for “Accommodation”, MTSES for the Incoming Agent (MTS Spain in this example) and 0FFG is a counter.

New destinations, construction based on 4 elements. I.e. in AEGHRG10SY, A stands for “Accommodation”, EG for Country (Egypt in this example), HRG for destination (Hurgada in this example) and 10SY is a counter.

The handling office for each hotel is included in the OTA_HotelDescriptiveInfo.

# 10. Appendix D, RatePlan codes

Our system provides different options to deal with multiple prices for the same room, expressed in RatePlans. With these options, we target to cater for need of simplicity, best-price logic (in general preferred by B2C partners) or provide all options (in general preferred by B2B partners).

RatePlanCode consists of five alphanumeric characters where each position provides an information regarding other factor affecting the rate. From these five elements, first two elements are shown just for the Distributor’s product management purposes (TO/OTA), only the last three are visible and form part of the room description for the final client to explain why the same room is bookable with different prices.

The components, descriptions and Explications are listed in Appendix K.

A RatePlan code is constructed from below RatePlan code elements:

Rate Type(1)|Rate Group(1)|Rate Refund(1)|Rate Sub Type(2)

Example: BHSP2 – BAR Rates - Hotel only - Semi-flexible – Promotional Rate 2

There is also a possibility of duplicating RatePlan which already exists in the contract. In this case the “.” character, and a number starting with 1, and then subsecuently every iteration.

Example: BHSP2.1

Where in **Rate Type** column the elements mean:

**0** → If the character is 0 would say that the value has been not defined – the rate stays unchanged like in the basic contract edition.

**B** → Bar - best available rates (changing due to rate updates)

**S** → Static – unchanged contract rate till the time of a promotion or an offer introduction

**F** → FIT - free individual traveller rates

R → Retail – advised end-price

**Rate Group**:

**H** → Hotel only - rates valid when booking contains only hotel

**P** → Packaging - rates valid when booking contains hotel + another product

**O** → Opaque - hotel rates must not be visible for end consumer

**R** → Rack - walk-in hotel rates for end consumer

**Rate Refund**:

**N**→Non refundable - immediately after booking; Nonrefundable rooms can be also still communicated within the RoomCode as a last character like it used to was (RMSD00000N)

**S**→ Semi-flexible – cancellation without fees up to 12 hours after booking

**F**→ Flexible – cancellation without fees up to 24 hours after booking

And in **Rate Sub Type**:

**A**→ Advanced Purchase - booking has to be paid before confirming

**P**→ Promotion rate

Rate Type(1), Rate Group(1), Rate Refund(1), Rate Sub Type(2)

| **Rate Type** | | **Rate Group** | | **Rate Refund** | | **Rate Sub Type** | |
|---|---|---|---|---|---|---|---|
| **Code** | **Description** | **Code** | **Description** | **Code** | **Description** | **Code** | **Description** |
| 0 | Rates | 0 | undefined | 0 | Undefined | 00 | Undefined |
| R | Retail rates | H | Hotel only | N | Non refundable | A0 | Advanced Purchase |
| S | Static rates | P | Packaging | S | Semi-flexible | A2 | Advanced Purchase 2 |
| F | FIT Rates | O | Opaque | F | Flexible | A3 | Advanced Purchase 3 |
| B | BAR rates | R | Rack | | | P0 | Promotional Rate |
| | | | | | | P2 | Promotional Rate 2 |
| | | | | | | P3 | Promotional Rate 3 |
| | | | | | | P4 | Promotional Rate 4 |
| | | | | | | P5 | Promotional Rate 5 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | | | | | P6 | Promotional Rate 6 |
| | | | | | | P7 | Promotional Rate 7 |
| | | | | | | P8 | Promotional Rate 8 |
| | | | | | | P9 | Promotional Rate 9 |
| | | | | | | 01 | [1] |
