Client billing data Exchange

Provided by: Business Financial Services

Introduction

The purpose of this document is to share with our clients the different alternatives OTS/MTS offers for billing.

Our billing systems providers several ways for delivering the invoices to our clients, where they can select the most suitable one.

Billing criteria:

I. Clients will receive by default one invoice per each voucher/reference number by company/Destination
II. Each service (Hotel, Transfer, etc) is invoiced separately
III. Invoicing will be launch on a daily basis according to signed commercial agreement
IV. Invoices are delivered to client same date they are billed.

Invoice format

Always focus on the paperless culture we promote the use of XML format, although we are capable to provide our invoices in other formats like:

- XML
- PDF 1 invoice= 1 PDF by default or X invoices = 1 PDF at your choice
- CSV

Data transfer (Invoice delivery method):

- **BAVEL – VOXEL (www.voxelgroup.net)**
  We have a collaboration with Voxel Group, one of the largest electronic billing platform in the tourist industry, used by over 400 Travel operators and over 15000 tourist suppliers worldwide. If you are already active with this platform, just let us know.
- **FTP Site (sftp.axisdata.net)**
  FTPS is an encrypted protocol since the information is sensible and private. In order to exchange massive data with no limits in file size and keen to go paperless, OTS/MTS provide a FTP site where clients are able to download their invoices at convenience.
  Alternatively, we could do the opposite and upload the files directly into your FTP.
  How to get connectivity to our FTP site:
  I. We need your IP address to whitelisted and assure only you have access to your folder.
  II. We will send you a user/password to grant you access to personal folder
  III. With your credentials, you will open sftp.axisdata.net and check all our invoices to download by yourselves at your convenience.
    - To ensure effective download of invoices, you must rename or move the remote file to another folder, for instance called/Downloaded
    - The main folder and a/downloaded folder will contain all downloaded files, (there we can create a policy to distribute the invoices per year/month/day)
  IV. Contact point: credit.control.ots@otsglobe.com or masterdata@otsglobe.com

Data structure:

CSV FILE:

The data structure is meant as a guideline for file format CSV, it is possible to adjust the columns and include/exclude only the information you would need, as long as the information is available on our system.

The structure is based on the fact, that different service type could be provided by OTS/MTS, which means you can have different records in the same file.

Standard structure:

Field separator	(;) the separator is by default semi colon
Decimal separator	(,) for the amount values, we uses comma separator, No thousand separators are used
Date format	(dd/mm/yy) The date format used is day/month/year, however we can set a different format prior notification if your system requires it.
CSV file name	CSV file given name is composed by: Document type-Destination-Client Code-Creation Timestamp. (i.e Invoice-MIR-PE888888-1312201611)

Data location	Data field	Data format	Sample Data	Comment
Header	CompanyName	Code	OTS Open Travel Service AG	OTS/MTS group company which provided the service
Header	DocumentNumber	Code	SICHOTS01600002179	Our invoice number
Header	VATNo	Code	CHE112641695	Our VAT reg. Number
